

My lawn is a patchwork of dappled green

If your lawn is starting to look like this, then it's likely suffering from a **Nutrient Deficiency**

*This lawn is showing symptoms of an **Iron & Manganese** deficiency and is very common on the coastal strip throughout WA.*

1. What causes this nutrient deficiency?

High alkaline soils with alkaline water from bores magnifies the problem. A high PH locks up most nutrients.

2. What do I do?

Specially formulated WA based fertilisers for Alkaline soils which have a higher Sulphur content label attached to them.
