

Turf Roll Size Comparison – Number of Seams

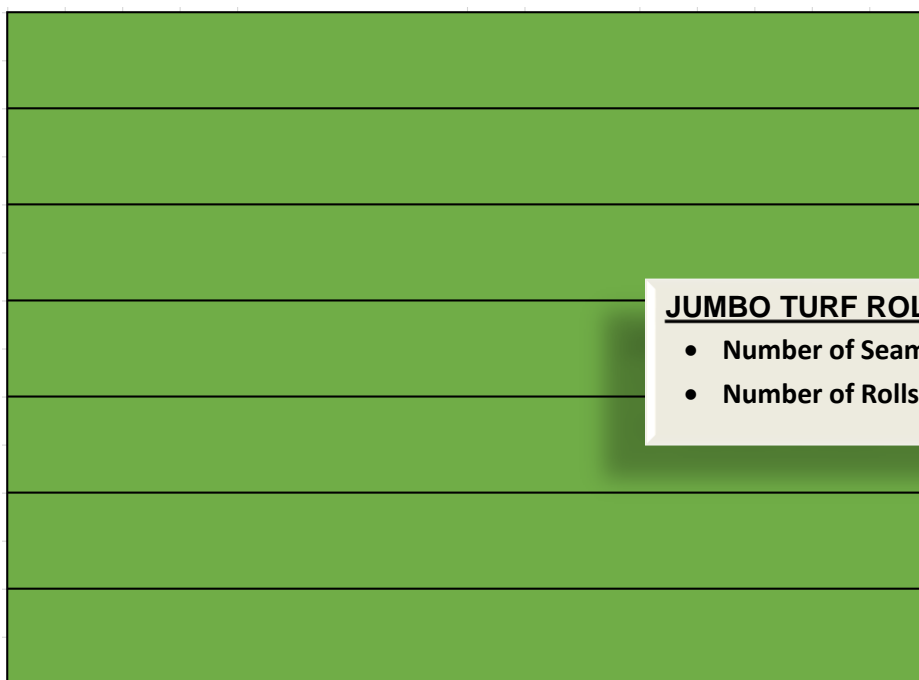

Standard Rolls vs Jumbo Rolls

Example – 98m² [8.176m x 12m]

STANDARD TURF ROLLS

- **Number of Seams** – **122** including outer edges
- **Number of Rolls** – **112** including 14 halves to create staggered laying pattern to reduce edges drying out and improved stability

JUMBO TURF ROLLS

- **Number of Seams** – **10** including outer edges
- **Number of Rolls** – **7**

Jumbo Roll Benefits compared to Standard Rolls

- **Anti-theft** - Weighing in at 500kg – 1.2 tonne, the Jumbo Roll is too heavy to roll up and load onto a ute.
- **Less water** needed during establishment, rolls are thicker therefore more able to retain water usually lost due to evaporation in smaller, thinner rolls. A reduction of up to 30%.
- **Quicker Recovery** – should the site experience an irrigation breakdown.
- **Ready to play** – stable enough to play a game of football after laying, no need to wait for root establishment.
- **90% less seams** than standards giving a more level finish, aesthetically better and with less chance for roll shrinkage.

Jumbo Rolls

Standards Rolls
